## METsys

Clause 6.6 of the ISM Code states, “The Company should establish procedures by which the ship's personnel receive relevant information on the SMS (*safety management system*) in a **working language** or languages understood by them”.

***English is the most common working language globally used on ships.***

A seafarer must be able to understand commands, ask questions and be able to relay information in the English language. Failure to communicate effectively can result in avoidable accidents that can have catastrophic impact on ships, their personnel and the environment.

**METsys** is a testing tool that provides confidence to the employer that the seafarer employed on board or being employed can understand basic instructions and can relay information correctly. The questions are specifically prepared considering situations likely to be encountered at sea, which the seafarer can relate to easily.

**METsys** is a complete English testing tool with a widespread question bank to test candidate on various aspects of the language:

- ✓ Grammar
- ✓ Pronunciation
- ✓ Maritime Terminology
- ✓ Reading Comprehension
- ✓ Listening
- ✓ Phrasing

### KEY FEATURES:

**METsys** is a robust and responsive program that can be used on PCs, laptops, tablets and mobiles.

- ❖ Scores are generated section-wise and easy to view by the client
- ❖ Easy to track list of registered users in the system.
- ❖ Easy to track number of licenses subscribed and remaining available.
- ❖ Generates graphical certificate/reports with score details in each area, in descending order from highest to lowest scores
- ❖ Types of questions include: Matching phrases, fill in the blanks, sentence structuring, listening comprehension, etc.
- ❖ Questions specifically related to shipboard activities
- ❖ A separate Company login to access details and reports of all the candidates
