Electronic Shipboard Structured Learning and Assessment Program (E-SSLA)

An  ISF Group Product

www.isfgi.com

SSLA – The Concept

- A Vessel is the best place for competence development of trainees: Deck Cadets, Junior Engineers and Tr. ETOs.
- The availability of guidance from seniors on board is never consistent for all trainees in a system, but rather dependent on the motivation and capabilities of seniors.
- A Training and Assessment Record Book (TAR) may help in recording tasks learnt but cannot assure systematic learning.
- A well-structured and executed program with monitoring onboard, through training department in a company, as well as professional mentors can go a long way in bringing about systematic competence development in a company.

Training Manager

Vessel: Trainee

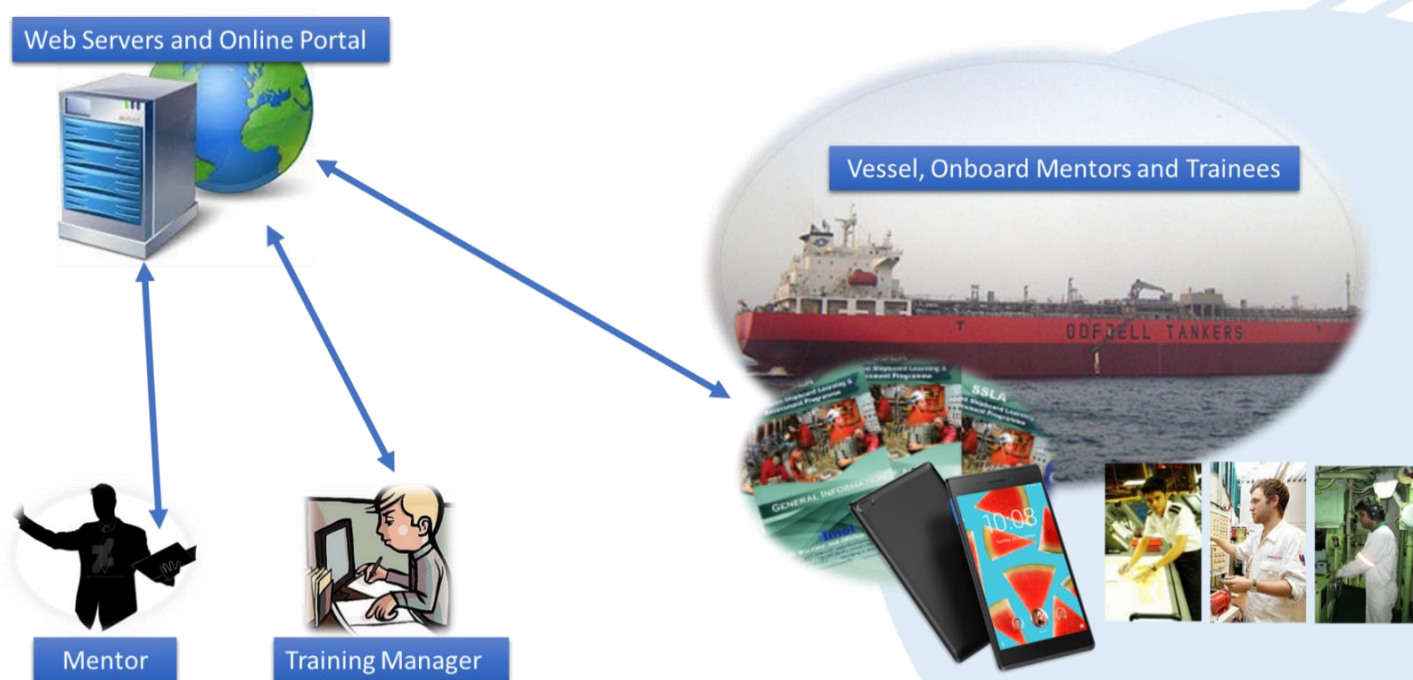

Mentor

*After many years of providing the Paper-based Shipboard Structured Learning and Assessment Program to major shipping companies and their cadets; ISP has launched the **Electronic Shipboard Structured Learning and Assessment Program in 2019.***

The Program Layout

- Program consists of 6 Learning Modules, loaded on the Secure Tablet and arranged according to the progression of training. Each module consists of tasks, expected to be completed by the student. Tasks are completed by typing text, labelling provided diagrams, drawing a diagram and attaching a picture of the diagram using the tablets camera.
- Saving the task, stores it in the memory.
- After completion of a module, it can be uploaded to the server on availability of an internet connection.
- The received module will be assessed by an onshore MENTOR and a feedback is sent to the candidate by email.
- After completion of onboard tenure, student will be de briefed by MENTOR. He can further his learning using CBT resources on the web portal, take online mock written tests & gets access to online oral question / answer database for his CoC examination.

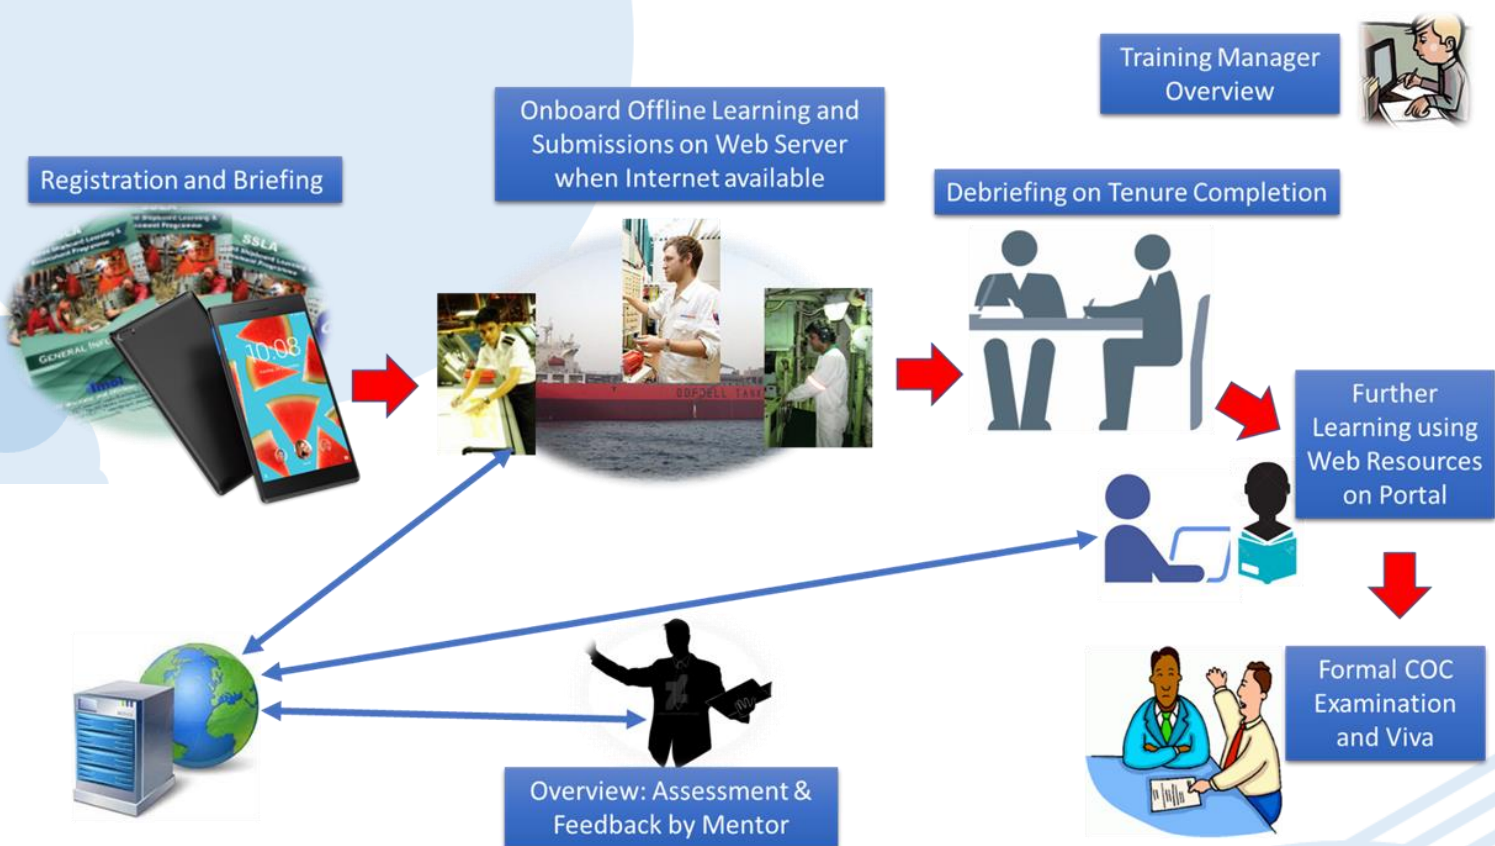

E-SSLA Student pack

Program Brochure	General Guidelines brochure	Guidance notes booklet, which provides necessary underpinning knowledge	A Pre-loaded, secure Android Tablet.
------------------	-----------------------------	---	--------------------------------------

The program contents include complete syllabus of the watchkeeping certificate of competency examinations, plus the shipboard operational requirements as a watchkeeping officer/engineer.

The Program Execution

Why use the E-SSLA?

For SYSTEMATIC, CONSISTENT COMPETENCE DEVELOPMENT of your young work force.

Better preparation for competency examinations through effective onboard learning reduces gestation time before young mariners return as certified officers.

IMPROVED, SAFE AND EFFICIENT OPERATIONS on board leading to better economics of the organization.
